Art Unit: 2816

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12 and 22-27, drawn to a frequency multiplier, classified in class 327, subclass 119.
- II. Claims 13-21, drawn to a data output buffer, classified in class 327, subclass 141.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the data output buffer of the invention may be patentable without the details of the claimed frequency multiplier (see, for example, evidence claim 13). The subcombination has separate utility such as for use in any integrated circuit which uses a frequency multiplying circuit.

Art Unit: 2816

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
